

Abstract of the Disclosure

A stack of large sheets includes first and second groups of folded sheets. Each of the sheets of each group is folded substantially in half along a first fold to form first and second plies, and the first and second plies are folded along a second fold to provide a first panel which extends from one edge of the sheet to the second fold, a second panel which extends from the other edge of the sheet to the second fold, a third panel which is a continuation of the second panel and which extends from the second fold to the first fold, and a fourth panel which is a continuation of the first panel and which extends from the second fold to the first fold. The third and fourth panels are joined at the first fold. The sheets of the stack can be either interfolded or non-interfolded. If the sheets are interfolded, the first panel of each sheet of each group is interfolded between the second and third panels of a sheet of the other group.
